

# Interdisciplinary Allied Health Assistant Workbook Education and Training Program

## Objective:

Allied Health Assistant (AHA) staff that work in an interdisciplinary team with highly complex Acquired Brain Injury (ABI) patients in a sub-acute setting, require an education and training program which is tailored to their unique workforce requirements

## Method:

Program learning requirements were identified by senior ABI staff with AHA input, and developed into discipline specific modules plus learning elements. The completed modules and elements make up the ABI AHA Workbook Program.

## Outcome:

The completed Workbook Program is integrated into the ABI AHA training and education program, and is an example of workforce innovation in a complex interdisciplinary clinical setting.
